

Ampco Pumps Company

PUMP REMANUFACTURING PROGRAM

Ampco's Pump Remanufacturing Program has earned an excellent reputation since its introduction in 2010. Our pump technicians at Depco are factory trained on the inspection and repair processes and can offer repair service in addition to our full line of sanitary pumps. As an authorized Ampco repair center, Depco customers can send us a lobe pump that has been in service and have it returned in "as new" condition. Depco stocks a large selection of parts allowing for quick turnaround time. Remanufacturing a used pump is a significantly lower-cost alternative to purchasing a new replacement pump. This program will restore your Waukesha Universal I and II Series style pump (from 006 to the 320) or Wright Pump TRA10 and TRA20 to its original performance and efficiency. Ampco pumps offer complete interchangeability, superior quality, and reliability. All "Complete Reconditioned" pumps are performance tested and include a full one-year factory warranty.

ADVANTAGES OF AMPCO'S REMANUFACTURING PROGRAM

- Reconditioning up to four times, depending on wear
- All assembled pumps are performance tested
- Helical Gears
- Quick turnaround
- Shafts up-graded to 17-4 PH
- Stainless steel bearing retainers
- Powder coated finish on gear case
- Options available to improve pump wear

Ampco Pumps Company
