

e-MP Series

MPA, MPR, MPD, MPV - 60 Hz

HIGH PRESSURE MULTISTAGE PUMPS ACCORDING TO ISO 5199

Intellitronic X

Intellitronic X is pump solution software with multiple search options and helpful project management facilities.

Intellitronic X can be available: at www.gouldsintellitronic.com

For more information, please, see page 118.

HYDRAULIC PERFORMANCE RANGE AT 60 Hz, 2 POLES

--- G&L 100 bar version. Contact factory for more information.

HYDRAULIC PERFORMANCE RANGE AT 60 Hz, 4 POLES

HIGH PRESSURE MULTISTAGE, RADIALY SPLIT, SEGMENTED CASING PUMPS

Markets and applications:

➤ General industry

All productive industries, i.e.: steel, sugar, timber, tire and rubber, pulp and paper, car, food and beverage

Applications: cooling and heating circuits for industrial processes, sprinkler systems, washing/cleaning systems, firefighting systems, filter systems, water transport, booster systems, water treatment systems

➤ Oil and gas

On-Shore platform, off-shore platforms, refineries, fracking.

Applications: sea water/water injection, firefighting systems, water transport, water treatment

➤ Power plants

i.e.: renewable energy, hydropower, biomass, geothermal, fossil power

Applications: boiler feed, condensate pumping, deaerator, water injection, water transport, auxiliary systems, firefighting systems, cooling and heating circuits, district cooling and heating systems

➤ Mining

Applications: dewatering (filtered water), water transport, firefighting systems

➤ Agriculture

Applications: water transport, irrigation.

➤ Leisure industry

i.e.: ski resorts, amusement parks

Applications: snow making water transport, water boosting

➤ Public utilities

Municipal water, desalination plants, drainage and flood protection

Applications: district cooling and heating systems, water transport, water treatment systems, desalination, reverse osmosis, nanofiltration, firefighting systems, booster systems

➤ Commercial building service

Applications: water transport, booster systems, firefighting systems, HVAC systems

➤ Others

Auxiliary applications in chemical industry, all water boosting applications

Pumpable fluids:

- Water
- Grey/used water
- Ground water
- Potable water
- Sea water
- Feed water
- Hot water
- Condensate
- Cooling/heating water
- Thermal water
- Brackish water

Pumpable fluids:

The **e-MP** series is a highly efficient **multistage, radially split, segmented casing** pump.

4 mechanical models build the basic platform for various horizontal and vertical configurations to meet requirements for the defined markets, applications and liquids.

DESIGN VERSIONS

CONFIGURATION	DESCRIPTION
<p>Model MPA</p> 	<p>Closed radial Impeller and U-turn diffuser design</p> <ul style="list-style-type: none"> • Horizontal shaft design • Axial suction nozzle • Radial discharge nozzle (left, top, right) • Drive on discharge side • Radial/Axial roller bearing on drive side • Plain bearing on suction side • Axial thrust balancing by drum design • Shaft sealing on discharge side only • Bare shaft or pump unit • Driver: NEMA motor standard, IEC available • Temperature Range: -13°F to +284°F (356°F) or -25°C to 140°C (180°C) • Inlet pressure: up to 145 psi (10 bar)
<p>Model MPR</p> 	<p>Closed radial Impeller and U-turn diffuser design</p> <ul style="list-style-type: none"> • Horizontal shaft design • Axial suction nozzle • Radial suction nozzle (left, top, right) • Radial discharge nozzle (left, top, right) • Drive on discharge side • Radial/Axial roller bearing on drive side • Plain bearing on suction side • Axial thrust balancing by drum design • Shaft sealing on discharge side only • Bare shaft or pump unit • Driver: NEMA motor standard, IEC available • IC-engine, turbine • Temperature Range: -13°F to +284°F (356°F) or -25°C to 140°C (180°C) • Inlet pressure: up to 145 psi (10 bar)
<p>Model MPD</p> 	<p>Closed radial Impeller and U-turn diffuser design</p> <ul style="list-style-type: none"> • Horizontal shaft design • Axial suction nozzle • Radial suction nozzle (left, top, right) • Radial discharge nozzle (left, top, right) • Drive on discharge side (optional suction side) • Radial/Axial roller bearing on drive side • Radial roller bearing on suction side • Axial thrust balancing by drum design • Shaft sealing on suction and discharge side • Bare shaft or pump unit • Driver: NEMA motor standard, IEC available • IC-engine, turbine • Temperature Range: -13°F to +284°F (356°F) or -25°C to 140°C (180°C) • Inlet pressure: up to 580 psi (40 bar)
<p>Model MPV</p> 	<p>Closed radial Impeller and U-turn diffuser design</p> <ul style="list-style-type: none"> • Vertical shaft design • Radial suction nozzle (0°-90°-180°-270°) • Radial discharge nozzle (0°-90°-180°-270°) • Drive on discharge side • Radial/Axial roller bearing on drive side • Plain bearing on suction side • Axial thrust balancing by drum design • Shaft sealing on discharge side only • Bare shaft or pump unit • Driver: NEMA motor standard up to 500HP, IEC available up to 400kW • Temperature Range: -13°F to +248°F (284°F) or -25°C to 120°C (140°C) • Inlet pressure: up to 145 psi (10 bar)

OPERATING DATA

DATA	VALUE
Discharge Flange Size	2" to 6"
Power	2-pole operation: 10 HP to 800 HP / 7.5 kW to 630 kW 4-pole operation: 3 HP to 500 HP / 2.2 kW to 400 kW
Heads*	up to approx. 2,000 ft / 610 m
Flows*	up to approx. 2,600 GPM / 590 m ³ /h
Temperature	-13°F to +284°F (optional to 356°F**) / -25°C to 140°C (optional to 180°C**)
Operating pressures	up to 914 psi / 63 bar

* G&L versions available with heads up to 3,100 ft / 950 m and flows up to 3,750 gpm / 850 m³/h. Consult factory for more information.

IDENTIFICATION CODE

M P V 1 2 5 B - 0 2 A B R S - 0 5 0 0 T T F 2 6 B - N N N 4

Pump Type [2 characters]
 [MP] = Highly efficient and flexible Multistage, radially split, segmented casing Pump, the new member of Xylem's e-product range

Configuration [1 character]
 [A] = Horizontal design
 Axial suction, radial discharge
 1 Roller bearing discharge side
 1 Slide bearing suction side
 [R] = Horizontal design
 Radial suction and discharge
 1 Roller bearing discharge side
 1 Slide bearing suction side
 [V] = Vertical design
 Radial suction and discharge
 1 Roller bearing discharge side
 1 Slide bearing suction side
 [D] = Horizontal design
 Radial suction and discharge
 2 Roller bearings
 Double bearing

Pump size [3 to 4 characters]
 [50A] [65A] [100A] [125A] [150A]
 [50B] [65B] [100B] [125B] [150B]

Number of stages/impellers [2 characters], e.g.:
 [04] = 4 stages

Combination of full and trimmed impellers [1 character]:
 [A] = all impeller full diameter
 [B] = trimmed/full impellers combination 1
 [C] = trimmed/full impellers combination 2
 [D] = trimmed/full impellers combination 3
 [E] = trimmed/full impellers combination 4
 [X] = duty point trimmed

Flange Orientation [1 character]
MPA
 [A] = End Suction, Top Discharge (code AO)
 [B] = End Suction, Left Discharge (code AL)
 [C] = End Suction, Right Discharge (code AR)
MPD and MPR
 [A] = Left Suction, Top Discharge (code LO)
 [B] = Right Suction, Top Discharge (code RO)
 [C] = Top Suction, Top Discharge (code OO)
 [D] = Left Suction, Right Discharge (code LR)

Motor type [1 character]
 [F] = Factory choice
 [X] = Other
 [A] = Motor not part of scope

No. of poles [1 character]
 [2] = 2 poles
 [4] = 4 poles

Seal Type [1 character]
 [] = Mechanical seal, standard
 [C] = Cartridge seal
 [P] = Soft packing

Mechanical Seal and O-Ring materials [1 character]
 [4] = Carbon/SiC/EPDM
 [2] = Carbon/SiC/FPM
 [Z] = SiC/SiC/EPDM
 [W] = SiC/SiC/FPM
 [N] = Tungsten carbide/ SiC/FPM
 [X] = Others
 [-] = Soft packing

Material diffuser [1 character]
 [C] = Cast iron
 [N] = Stainless steel
 [R] = Duplex
 [T] = Super duplex
 [X] = Others

Impeller material [1 character]
 [C] = Cast iron
 [B] = Bronze
 [N] = Stainless steel
 [R] = Duplex
 [T] = Super duplex
 [X] = Others

Casing material [1 character]
 [C] = Cast iron
 [D] = Ductile iron
 [F] = Cast steel
 [N] = Stainless steel
 [R] = Duplex
 [T] = Super duplex
 [X] = Others

Motor frequency and voltage [2 characters]
 50 Hz
 [5B] = 190/380-415V
 [5C] = 190/380V
 [5D] = 220V
 [5E] = 380V
 [5F] = 415V
 [5X] = Other Voltage
 60 Hz
 [6B] = 208-230/460V
 [6C] = 230/460V
 [6D] = 200V
 [6E] = 230V
 [6F] = 460V
 [6G] = 575V
 [6X] = Other voltage

EXAMPLES:

Pump coupled with motor
 MPV125B-02ABRS-0500TTF26B-NNN4
 Series eMP, vertical configuration, radial suction and discharge, size DN125, hydraulic B, 2 stages/impellers, all impellers with full diameter, flange orientation: left suction and rear discharge, ANSI suction flange class 150, ANSI discharge flange class 300, 500HP factory choice motor with TEPE enclosure, 5009SD frame size, 2 poles, 60Hz at 208-230/460V, stainless steel casings, stainless steel impeller, stainless steel diffusers, mechanical seal Carbon/SiC/EPDM.

Pump mounted on frame, with coupling, motor not part of scope
 MPV125B-02ABRS-0500TTA26B-NNN4
 Series eMP, vertical configuration, radial suction and discharge, size DN125, hydraulic B, 2 stages/impellers, all impellers with full diameter, flange orientation: left suction and rear discharge, ANSI suction flange class 150, ANSI discharge flange class 300, to be used with motor frame size 5009SD, 2 poles (motor not part of scope), stainless steel casings, stainless steel impeller, stainless steel diffusers, mechanical seal Carbon/SiC/EPDM.

Bare shaft pump (only for horizontal configurations)
 MPA125B-02AARS-NNN4
 Series eMP, vertical configuration, radial suction and discharge, size DN125, hydraulic B, 2 stages/impellers, all impellers with full diameter, flange orientation: end suction and top discharge, ANSI suction flange class 150, ANSI discharge flange class 300, motor and coupling not part of scope, stainless steel casings, stainless steel impeller, stainless steel diffusers, mechanical seal Carbon/SiC/EPDM (of scope), stainless steel casings, stainless steel impeller, stainless steel diffusers, mechanical seal Carbon/SiC/EPDM.

NOTE:

- "e-" in front of MP is used for all marketing materials and in the selection tools.
- "e-" in front of MP is NOT used on the name plate and NOT in denomination of pumps.
- Not used nomenclature characters, e.g. if the character description is [] are skipped and the next used character is shifted to the left.

IDENTIFICATION CODE AND DESIGN OVERVIEW

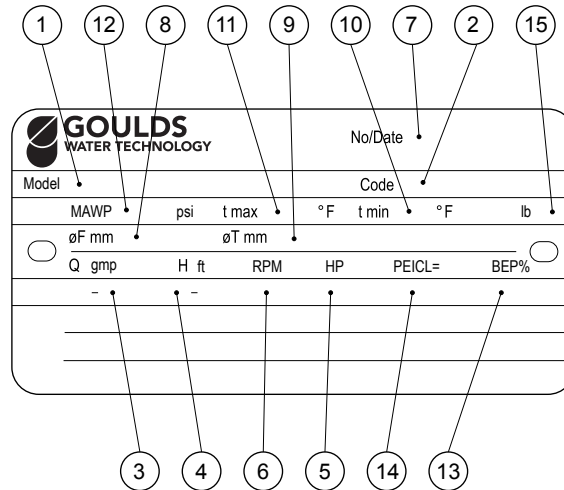

Example: **MPV125B-02ABRS-0500TTF26B-NNN4**

Characters	Description
e-MP	Highly efficient and flexible multistage, radially split, segmented casing pump Various design features for optimized efficiency values over the complete performance range offering configuration flexibility for a wide range of applications in different markets.
V	Configuration Total 4 models to meeting different installation requirements 3 horizontal models: e-MPA, e-MPR, e-MPD 1 vertical model: e-MPV <u>Suction and Discharge casings:</u> Suction casings are available with radial and axial arranged nozzles Discharge casings are available with radial arranged nozzles Radial casing nozzles (suction and discharge) can be turned in 90° steps Sealing: O-rings <u>Bearings:</u> depending on mechanical model: Drive end: roller bearing (grease or oil lubricated) Non-drive end: roller bearing (grease or oil lubricated) or plain bearing (lubricated by pumped liquid) <u>Coupling and Coupling Guard:</u> Horizontal models: flexible coupling with and without spacer Vertical model: flexible coupling
125B	Pump size Total 5 mechanical sizes: DN50, DN65, DN100, DN125, to cover best efficiencies points (BEP) over the flow performance range. Hydraulic identifier (combine with above) Total 10 hydraulics: 2 hydraulics (A,B) by size to increase the coverage of best efficiency points (BEP) over the flow performance range
02A	Number of stages and combination of full diameter and trimmed impellers Up to 18 stages (mechanical size 50) 4 standard impeller trims and optional trims of impellers exactly to the required duty point for an optimized efficiency. Impeller design: radial flow impeller, enclosed
B	Flange orientation
RS	ANSI class for suction and discharge flanges Flange ratings available: ANSI B16.5 Class 150, 300 and 600
0500	Motor HP
T	Motor enclosure
T	Frame size NEMA frame sizes
F	Motor type Factory of customer choice
2	Number of poles 2 or 4 poles
6B	Motor frequency and voltage 50Hz and 60Hz 3 phase power supply for various voltages
NNN	Material identification for casings (suction, discharge and stage casing), impeller and diffuser Casings: cast iron, ductile iron, steel, stainless steel (AISI 316), duplex stainless steel, super duplex stainless steel Impeller: cast iron, bronze, stainless steel (AISI 316), duplex stainless steel, super duplex stainless steel Diffuser: cast iron, stainless steel (AISI 316), duplex stainless steel, super duplex stainless steel
4()	Material identification for mechanical seal and O-ring and type of seal Elastomers: EPM, FKM Shaft sealing: mechanical seal (EN 12756), cartridge seal (single, single quench, double), packing.

LIMIT CURVES DEPENDING ON PUMP HYDRAULICS AND MOTOR SPEED

Pump size	Speed (rpm)			
	3550	2900	1750	1450
50	X	X	X	X
65	X	X	X	X
100	Y	X	X	X
125	Y	Y	X	X
150	n/a	Y	X	X

NOTE: Limit - Z ... Limit for material combination SiC/SiC/EPDM (Q1 Q1 E G G) or SiC/SiC/FKM (FPM) (Q1 Q1 V G G)

MP_Limit_Mech_Seal-en_a_td

GENERAL CONSIDERATIONS

This diagram and selection table is valid for clean water (solids < 0.0013 oz/US gallon) or water for feeding boilers, partially or totally demineralized.

If the water temperature exceeds 176 °F, minimum inlet pressure must be guaranteed.

PRESSURE / TEMPERATURE CHARTS FOR PUMP FLANGES ACCORDING TO ANSI B16.5 AND CASING MATERIAL

MOTORS

- Standard NEMA frame motors in totally enclosed fan cooled or open drip proof.
- Motor Canopies (vertical type) must be ordered separately from the list below when the motor is ordered.
- Typical 4 week lead times, consult factory for actual lead times. Goolds Water Technology's choice of manufacturer.

MINIMUM EFFICIENCY LEVELS

As part of the Energy Conservation Program, in 2016 the US Department of Energy issued the **Energy Conservation Standards for Pumps** and **Test Procedure for Pumps** (10 CFR Parts 429 and 431), which establish minimum efficiency levels for certain categories of pumps and test criteria for confirming these efficiency levels.

These new standards, that will become effective in **January 27, 2020**, define a **Pump Energy Index (PEI)** for several pump equipment classes manufactured in, or imported into, the United States. The PEI for a certain pump model is the ratio between the Pump Efficiency Rating (PER) of that model and a calculated minimally compliant PER. The minimally compliant PER is determined based on specific speed, flow at BEP and a specified constant (C-value). A compliant pump model will have a PEI of less than or equal to 1.

While the MPA, MPD and MPR are not covered by this regulation, the minimum efficiency levels for the e-MPV pumps are established under the RSV (radially split, multi-stage, vertical, in-line, diffuser casing) equipment class (for basic models that have a head of less than 459ft and require less than 200HP at BEP). The standard level for the RSV pumps was set at the same level as the one established by the EU regulation.

Test Procedure

DOE Energy Conservation Program: Test Procedure for Pumps specifies **HI 40.6 “Methods for Rotodynamic Pump Efficiency Standard”** as the official testing standard to be used in order to determine the PEI for a certain pump model.

PEI values for e-MPV at 2 pole

PUMP SIZE	PEI
MPV50A	0.92
MPV50B	0.90
MPV65A	0.91
MPV65B	0.89

SENSOR CONNECTOR AND SENSORS FOR PUMP MONITORING AND DIAGNOSTIC SYSTEMS

Bearing temperature (X)¹			
PUMP SIZE	G [inch]	MPA, MPR, MPD	MPV
		L [inch]	L [inch]
50	1/4	0.79	3.15
65	1/4	0.98	3.70
100	1/4	0.79	3.98
125	1/4	0.98	4.49
150	1/4	1.18	5.12

Bearing vibrations sensors (Y)²

¹ = Bearing temperature sensor: eg. PT100 - (4 to 20 mA)

MP-sensor-us_a_td

² = Bearing vibration nipple: eg. SPM 32000

Standard dimensions (see also figure above) are metric. Adapters for USC units are available.

REPORTS AND DECLARATIONS

i) Test reports

a) Factory Test Report

- Test report compiled at the end of the assembly line, including flow-head performance test (ISO 9906:2012 - Grade 3B) and hydrostatic pressure test.

b) Audit Test Report

- Test report for electric pumps compiled in the test room, comprising flow-head-pump input-pump efficiency performance test (according to ISO 9906:2012)

c) NPSH Test Report

- Test report for electric pumps compiled in the test room, comprising flow-NPSH performance test (according to ISO 9906:2012)

d) Noise Test Report

- Report indicating sound pressure and power measurements (EN ISO 20361, EN ISO 11203, EN ISO 4871)

e) Vibration Test Report

- (unavailable for submerged or submergible pumps)
- Report indicating vibration measurements (ISO 10816-1)

ii) Declaration of product conformity with the technical requirements indicated in the order

a) EN 10204:2004 - type 2.1

- does not include test results on supplied or similar products.

b) EN 10204:2004 - type 2.2

- includes test results (materials certificates) on similar products.

iii) Issue of a further EC Declaration of Conformity,

- in addition to the one accompanying the product, it comprises references to European law and the main technical standards (e.g.: MD 2006/42/EC, EMCD 2004/108/EC, ErP 2009/125/EC).

N.B.: if the request is made after receipt of the product, communicate the code (name) and serial number (date + progressive number).

iv) Manufacturer's declaration of conformity

- relative to one of more types of products without indicating specific codes and serial numbers.

v) Other certificates and/or documentation on request

- subject to availability or feasibility.

vi) Duplication of certificates and/or documentation on request

- subject to availability or feasibility.

TECHNICAL APPENDIX

NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapor-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapor pressure of the liquid.

The vapor-filled cavities flow with the current and when they reach a higher pressure areas the vapor contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel .

The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in feet) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapor pressure (expressed in feet) that the liquid has at the pump inlet .

A margin above the NPSHr is necessary in order to achieve the pump's published performance and an adequate service life.

To find the static height (hz) at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (NPSHr + 2 \text{ ft}) + h_f + h_{pv}$$

where:

h_p is the absolute pressure applied to the free liquid surface in the suction tank, expressed in feet of liquid; h_p is the quotient between the barometric pressure and the specific weight of the liquid;

h_z is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in feet; h_z is negative when the liquid level is lower than the pump axis;

h_f is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc ;

h_{pv} is the vapor pressure of the liquid at the operating temperature, expressed in feet of the liquid. h_{pv} is the quotient between the P_v vapor pressure and the liquid's specific weight;

2ft is the safety margin.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (40°F) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

Water temperature (°F)	68	104	140	176	194	230	248
Suction loss (ft)	- .7	2.3	6.6	16.4	24.3	50.5	70.5

Elevation above sea level (ft)	1600	3300	4900	6500	8200	9800
Suction loss (ft)	1.8	3.6	5.4	7.2	9.0	10.8

To reduce it to a minimum, especially in cases of high suction head (over 13 - 16 feet) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

HEAD

Units	Lbs. Per Square Inch	Feet of Water	Meters of Water	Inches of Mercury	Atmospheres	Kilograms Per Sq. C.M.	bar
1 Lb. Per Square Inch	1	2.31	0.704	2.04	0.0681	0.0703	0.0690
1 Foot of Water	0.433	1	0.305	0.882	0.02947	0.0305	0.0299
1 Meter of Water	1.421	3.28	1	2.89	0.0967	0.1	0.0981
1 Inch of Mercury	0.491	1.134	0.3456	1	0.0334	0.0345	0.0339
1 Atm (at Sea Level)	14.7	33.93	10.34	29.92	1	1.033	1.0132
1 Kilogram Per Sq. C.M.	14.22	32.8	10	28.96	0.968	1	0.9809
1 bar	14.491	33.45	10.198	29.47	0.987	1.0195	1

Equivalent units are based on density of fresh water from 32° to 62° F. Equivalent units are based on density of mercury from 32° to 62° F, sufficient accuracy.

Each 1,000 feet of ascent decreases pressure about 1/2 lb./square inch.

TECHNICAL APPENDIX

FURTHER PRODUCT SELECTION AND DOCUMENTATION

Intellitronic X

Intellitronic X is pump solution software with multiple search options and helpful project management facilities.

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Goulds Water Technology products. The search by application guides users not familiar with the product range to the right choice. The detailed output makes it easy to select the optimal pump from the given alternatives.

The search can be made by:

- Application
- Product type
- Duty point

Intellitronic X gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings (can be downloaded in dxf format.)
- Options
- Data sheet printouts
- Document downloads incl dxf files

The best way to work with Intellitronic X is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Intellitronic X users

Every registered user has a proper space, where all projects are saved.

For more information about Intellitronic X please contact our sales network or visit www.gouldsintellitronic.com.

NOTES

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
