e-XC Pump Casing Variants

Drop-in Stuffing Box Design (Drop-in Seal Chamber)

The drop-in stuffing box design utilizes a removable stuffing box. This design allows a pre-assembled rotating assembly to be installed into the lower casing. Seal gland, cartridge seals, and packing glands are affixed to the stuffing box in for this design variant. Flush lines connect to seal gland or stuffing box ports for all sealing configurations.

Integrated Stuffing Box Design (Integrated Seal Chamber)

The integrated stuffing box design omits the need for a separate stuffing box. Instead, the upper and lower casing halves form a seal chamber when the pump is assembled. Seal gland, cartridge seals, and packing glands are fastened directly to the pump casing. Flush lines connect to seal gland ports for mechanical and cartridge seal configurations. Flush lines connect to ports located on top of the upper casing for the packing seal configuration.

Seal Chamber Interchangeability Charts

The diagrams below show the seal chamber components required for each seal configuration. The interchangeability tables map out how to switch from the standard seal configuration to any other configuration. These tables only map out how to change from a dry to wet shaft configuration between the standard seal configurations for each shaft type. Consult the factory for information regarding seal interchangeabilities not outlined in this document. The diagrams below depict seal configurations for the drop-in stuffing box casing design. For integrated stuffing box casing designs, simply omit the stuffing box and its related components.

NSF/ANSI 61 & NSF/ANSI 372 – CSA Group Certified¹

1. NSF/ANSI/CAN 61 (Drinking Water System Components – Health Effects) are certification standards for products that come into contact with drinking water which ensure a product is safe for potable water applications.
 - a. CSA Group File Number: 009553_0_000
 - b. CSA Group Class Number: 6861-08
2. NSF/ANSI/CAN 372 (*Drinking Water System Components — Lead Content*) verifies the lead content within drinking water products to ensure they are safe as defined by the Safe Drinking Water Act. These requirements are based on EPA and Health Canada requirements.
 - a. CSA Group File Number: 009553_0_000
 - b. CSA Group Class Number: 6853-01

Certified Materials of Construction

Standard construction (dry shaft) cast iron, ductile iron or CF8 (316 SS) enclosed e-XC pumps, fitted with either CF8 (304 SS) or CF8M (316 SS) impeller and impeller wear rings, and bronze or 2205 (duplex) SS or Nitronic 60 casing wear rings are certified to both NSF/ANSI/CAN 61 and 372 standards. Standard construction pumps are certified for use with either MR3 (C/SiC/EPDM or SiC/SiC/EPDM) metal pusher and MR4 (C/SiC/EPDM) rubber bellow mechanical seals.

- c. Optional wet shaft construction e-XC pumps with either 420 SS shaft with the same casing, impeller assembly, and mechanical seal configurations listed above are also certified to NSF/ANSI/CAN 61 and 372 standards.
- d. Although not required, an optional epoxy coating (EpoXline 22) is available.
