

# REVERSO

## Fuel Polishing Systems

Maintain diesel fuel quality for industrial day tanks, storage tanks, and marine tanks.

- Portable and installed
- Flow rates 80 - 1600 GPH for cleaning tanks up to 10,000+ gallons
- AC or DC systems

## Fuel Primer

Prime the fuel system after servicing the filters and engine, rather than manually purging the air out of the system.

- Momentary switch
- Regulated pressure output
- DC systems

## Oil Change Systems

Drain and fill oil faster, while reducing the risk of spill with a fast lube oil change system (FLOCS).

- Portable and installed
- Multiple pieces of equipment can be serviced
- AC or DC systems

## Pumps

Transfer diesel, oil, or water with gear-driven or impeller-driven types.

- Flow rates 1-10 GPM
- Reversible or one-direction flow
- AC or DC

## Automatic Outboard Flushing System

Flush each engine automatically in sequence, with a single water connection and start button.

- For 1, 2, 3, or 4 outboards of leading engine manufacturers
- Automatic and service mode
- 12V DC systems

## Automatic Duplex

Filter diesel fuel before the engine for less engine downtime and more reliability.

- Flow rates 79-2060 GPH
- Automatically switches from primary to back-up filter
- DC systems
