Mag-Drive Series Description

Tuthill Pump Group has been a leader in the development and manufacture of positive displacement pumps since 1927. Tuthill Pump – Concord Operation, a sister division, has been at the forefront in the development of miniature magnetically coupled gear pumps since 1977. From this vast knowledge in both magnet and pump technology has come the ML, MC & MG series of magnetically coupled sealless pumps.

The ML, MC & MG series of pumps combines the time proven reliability of internal gear design with the advantages of magnetically coupled sealless construction. These pumps incorporate Samarium Cobalt magnets for a broader temperature range compared to the more standard Neodymium magnets found in the industry. They are designed for hazardous or toxic pumping applications where fluid leakage cannot be tolerated, incorporating both full encapsulation to protect the inner magnet from the process fluid and a unique fluid flow path to provide cooling for the inner magnet containment area.

The ML series pumps have capacities to 6 G.P.M. and differential pressures up to 500 P.S.I. with a maximum pressure rating up to 500 P.S.I. The ML series Samarium Cobalt magnets are rated to 5 ft-lbs. of torque. This series is designed to be adapter mounted for direct coupling to a 56C frame motor.

The MC series pumps have capacities to 84 G.P.M. and differential pressures up to 150 P.S.I. with a maximum pressure rating of 300 P.S.I. The MC series Samarium Cobalt magnets for the MC2I, MC3I & MC4I are rated to 16 ft-lbs., and the MC5I & MC6I are rated to 60 ft-lbs. of torque.

The MG series of pumps have capacities up to 80 G.P.M. and differential pressures up to 200 P.S.I. with a maximum pressure rating of 300 P.S.I. The MG series Samarium Cobalt magnets for the MG015 & MG030 are rated to 16 ft-lbs., and the MG080 magnets are rated to 60 ft-lbs. The MG series also has a patented rotor thrust control feature which improves the life and performance of the pump, and is also used for setting the pump end clearance.

WARNING

WARNING

The magnets in magnetically coupled pumps create very strong magnetic fields. Special care must be taken with the following:

Pacemakers - Magnets can upset the timing of pacemakers. These magnets should be kept away from all pacemakers. Because of the health risks involved the importance of this cannot be overstated.

Credit Cards - Magnets can scramble the information on a credit card's magnetic tape.

Computers, Computer Tapes and Computer Disks - Magnets can scramble the information on the memory device.

Watches - Magnets can affect the workings of traditional mechanical spring driven watches as well as chip and electronically controlled designs.

Electronic Instruments - Sensitive electronic instruments and devices may change calibration or be damaged by a powerful magnetic field.

Explosive Atmosphere - Rare earth magnets and magnetic materials may create sparks through contact in handling. Never handle rare earth magnets in explosive atmospheres because sparking may ignite the atmosphere.

WARNING

WARNING

DO NOT PLACE HAND OR FINGERS BETWEEN THE HOUSING AND ADAPTER. The magnets are extremely strong and will attract all metallic objects and can be the source of pinch points. Do not wear watches or other metallic jewelry when working with magnets.

ML & MC Temperature Limits

Notes:

1. A pump's performance is dependent on more than just the temperature ranges of the component materials.

ML & MC Pump Materials of Construction

<i>Part Name</i>	<i>Material</i>	<i>Standard</i>	<i>Comments</i>	<i>Availability</i>
Housing	Cast Iron	ASTM A48		Std.
Housing Bushing	Steel	AISI 12L14		Std.
	Carbon	Carbon Graphite Resin		Std.
Cover	Cast Iron	ASTM A48 – 96a		Std.
Rotor	Steel	ASTM A311	Stressproof	Std.
Idler	Steel	AISI 1118 or AISI 1117		Std.
Idler Pin	Steel	AISI 1117	Case Hardened	Std.
Idler Bushing	Carbon	Carbon Graphite Resin		Std.
Housing Plug	Steel	AISI 12L14	DU Bushing is assembled in housing plug	Std.
O-Rings	Viton		Std. Mtl. used for cover seal	Std.
	PTFE Encapsulated Viton		Std. Mtl. used for canister seal	
Magnet Housing	Cast Iron	ASTM A48	Std. for MC Series	Std.
	Aluminum	ASTM SC64C	Std. for ML Series	Std.
Magnets	Samarium Cobalt			Std.
Canister	Stainless Steel	ASTM A276, grade 316		Std.

ML Pump NPSH Data

MG Pump Temperature Limits

Notes:

1. A pump's performance is dependent on more than just the temperature ranges of the component materials.

MGI & MGS Pump Materials of Construction

Part Name	Material	Standard	Comments	Availability

MG Pump NPSH Data

NPSH Required for Tuthill MG Series pumps 0-750 SSU

SPEED RPM PUMP SERIES		150	250	350	450	550	750	950	1150	1450	1750
		MG015	FT.	1.4	1.6	1.8	2.1	2.4	3.0	4.5	6.2
MG030	FT.	1.4	1.6	1.8	2.1	2.4	3.0	4.5	6.2	8.6	11.3
MG080	FT.	1.5	1.8	2.2	2.7	3.4	5.2	7.7	11.2	15.0	-

Notes:

1. For liquid viscosity up to 750 SSU.
2. NPSHA (Net Positive Suction Head Available) must be greater than the NPSHR (Net Positive Suction Head Required) value provided in the table.
3. Values above are for feet of liquid with a Specific Gravity of 1.0.

MG Flange Ratings (Cast Iron)

NOTES:

- 1) These charts show the ratings for flanges only - the maximum pump operating conditions must also be checked.
- 2) Consult the appropriate Tuthill catalog for maximum allowable operating pressures and temperatures, based on pump application conditions and pump features.
- 3) These ratings are based on non-shock pressures.
- 4) ANSI data is from ASME/ANSI B16.1 - 1989 (class A). Consult this spec for more information.

	Warning	Rapid temperature change can result in flange failure and leakage, which can cause property damage or serious injury. Do not exceed cast iron tensile strength when bolting flanges.
