DIAPHRAGM and OSCILLATING PUMPS are a versatile family of pumps that can be used in a variety of fluid handling applications. Because of their design, DIAPHRAGM and OSCILLATING PUMPS are self priming, and most designs can run dry without damage, making them a very user friendly pump to operate. We have every conceivable combination of materials of construction, size, drive, and configuration. There is also a large installed base of these on various types of OEM equipment. Depco is here to help you match out replacement pumps and parts for your customer.
