Vertical Sump.....	76, 104

SUBMERSIBLE PUMPS have evolved into multiple configurations for use in a large variety of applications including basement sumps, decorative fountains, ponds, lift stations, pool covers and sewage or effluent. **CONDENSATE PUMPS** are submersible or open air in design. Their two main applications involve the removing of accumulated condensate from the sump of cooling/heating equipment and the handling of accumulated condensate from boilers. Depco maintains a huge inventory of multiple brands of these two pump types. So, if you need a pump today... Call Depco!

Submersible

Applications Include:

- Boiler Condensate Gathering
- Sewage
- Effluent / Run-off Water
- Parts Washers
- Basement Drain
- Ponds / Fountains / Water Effects
- Marine Bilges
- Sumps / Pit Drainage
- OEM

Industries Served:

- Municipal
- Residential
- Commercial
- Utility
- Fountain / Water Effect
- Construction
- Institutional Laundry
- Automotive
- Marine
