

The 195 ft. La Baronessa is the largest all-aluminum motor yacht in the world and the largest US built yacht for a private owner since 1930.

Twenty years of service to the marine and industrial pump industry has given Depco Pump an un-paralled depth of familiarity with every fluid handling system afloat. Our global experience on luxury yachts has us working hand in hand with architects, engineers, builders, suppliers, re-fit facilities and captains, conscious of the needs and concerns of all interested parties. Our wealth of products enables us to furnish pumps that meet or exceed your most stringent requirements, whether MCA, Lloyds, ABS, USCG or simply fitting a ten pound pump in a five pound hold. By custom assembling your specified pump end to the required driver, we are able to support any system be it single or three phase, 50 or 60 hertz, AC or DC power, hydraulic, pneumatic, diesel, gas, clutch, gear, pulley or manually operated.

Water System and Reverse Osmosis

Pages 62-63 & 10-17

High pressure and high volume pumps are available separately or complete with AC or DC motors for multiple outlet water supply or reverse osmosis systems.

Air Conditioning and Refrigeration

Pages 66-73 & 4-9

High volume, flooded suction and self-priming pumps in bronze, stainless steel and plastic construction assembled to your desired voltage, frequency and electrical enclosure.

Fire Control

Pages 60-61

Diesel powered stand-alone and electrically powered fire control pumps are available in bronze and cast iron. These pumps meet MCA, Lloyds, ABS and USCG requirements for flow, pressure and electrical enclosures.

Washdown

Pages 63, 66-67, 18-21 & 27

Manual and automatic "demand" operated pumps for a single outlet or a vessel wide washdown system. Models are available for salt or fresh water operation and are constructed of bronze or stainless steel.

Fuel Transfer

Pages 75-79 & 33-40

High volume fuel transfer for ballast balancing and refueling in AC or DC electrical designs. Reversible operation is also available.

Oil Change

Pages 65, 67 & 33-38

Portable, single engine and complete ship systems to simplify engine and generator oil change and maintenance.

Bilge

Pages 65-67 & 22-30

High volume self-priming and submersible pumps for normal and emergency operation. Available in AC, DC and custom drives including clutch, hydraulic and engine.

Holding Tank Pumpout

Pages 64-65 & 41-43

Rapid transfer and/or maceration is provided by our self-priming pumps. Available in bronze, stainless steel and plastic construction.
