In-line Bulkhead Pressure Regulators

BULKHEAD AND IN-LINE MOUNT PRESSURE REGULATORS

Protect your boat's water system appliances and pump from the damaging pressure of unregulated marina water hookups. These pressure regulators reduce high water pressures of up to 100 psi down to safe levels. They also include a backflow preventer. The bulkhead versions come in a variety of colors to compliment your vessel while the in-line will easily mount between two 3/4" garden hose fittings.
