## NEW MAJOR AND MINOR SERVICE KITS FOR ENGINE COOLING PUMPS

**Exclusive:** Depco has created Major and Minor service kits for most engine cooling pumps. Kit part numbers are noted alongside the individual pump parts lists displayed in this catalog section. No more guessing which parts you need. Minor kits (impeller, seal and gasket) are ideal for regular maintenance while Major kits provide all the internal parts normally replaced in a major overhaul. The shafts are not included in either kit. However, they are usually available separately. Major and Minor service kits are easy to identify, save time and save cost over purchasing the parts individually. Just another way Depco simplifies pump repairs.

## RAW WATER STRAINER

Depco stocks a complete line of raw water strainers and service parts. Perko's bronze 493 series strainers include sizes from 1/2" to 2 1/2" ports (see page 69).

Groco's bronze ARG and SA series include sizes from 1/2" to 3" ports (see pages 70 and 71). Groco's bronze SE series meets ABS requirements and include sizes from 4" to 6" ports (see page 72). Depco also stocks a wide variety of economical plastic strainers for raw water, fresh water or bilge suction applications (see pages 67 and 68).

## ENGINE BRAND IMPELLER CROSS REFERENCES

Years of effort in identifying proprietary engine cooling pumps, parts and replacement impellers have resulted in volumes of reference material in our marine department. Some of this wealth of information on impellers has been reproduced in this catalog. If you don't find a cross reference for your impeller give us a call. We'll utilize our experience, search our vast library, or call on our industry contact to match out and identify the source for your impeller.

### IMPELLER CROSS REFERENCE

Caterpillar	115
Chris-Craft	111
Crusader	112
Cummins	118
Detroit Diesel	119
