

Electric motor or gas engine must be purchased separately.

## Sleeved Direct-Drive Plunger Pumps

**Electric Models** 4SF32ELS  
4SF40ELS, 4SF45ELS  
4SF50ELS

**Gas Models** 4SF30GS1  
4SF35GS1, 4SF40GS1  
4SF45GS1, 4SF50GS1

### PUMP FEATURES

- UNIFLOW design provides continuous fluid flow forward through the pump, reduces cavitation risk and increases pump life.
- Unique spring loaded inlet valves and the flow through ceramic plungers allow excellent suction capabilities.
- Compact, hollow shafted pump for direct mounting to either gas or electric motor, eliminates the need for pulleys, belts, gearboxes.
- Regulating Unloader mounts directly on each pump to assure system pressure control and pump protection.
- Convenient multiple porting provides installation flexibility.

### COMMON PUMP SPECIFICATIONS

Max. Inlet Pressure (Electric).....	-2 to 75 PSI	(-0.14 to 5.25 BAR)
Max. Inlet Pressure (Gas).....	Flooded to 75 PSI	(Flooded to 5.25 BAR)
Bore .....	0.787"	(20 mm)
Max Fluid Temperature .....	160°F	(71°C)
Crankcase Capacity .....	23.66 oz.	(0.70 L)
Inlet Port (1) .....	1/2" NPT	(1/2" NPT)
By-Pass Port (1) .....	3/8" NPT	(3/8" NPT)
Discharge Ports (2) .....	3/8" NPT	(3/8" NPT)
Auxiliary Port (1) .....	1/4" NPT	(1/4" NPT)
Weight Pump .....	24.31 lbs.	(11.0 kg)
Dimensions (Pump Only).....	8.27" x 11.06" x 12.28"	(210 x 281 x 312 mm)

Refer to pump Service Manual for important Inlet Condition Check-List, Start-up Procedure, Tech Bulletins and Pump Maintenance information.

## OPERATION

A Regulating Unloader comes with each SF pump to provide system pressure regulation and pump protection.

For **MAXIMUM SUCTION** capability, Regulating Unloader should be remounted on discharge manifold, **OPPOSITE** from pump inlet port.

By-pass for the regulating unloader may drain to the ground, drain to a reservoir or connect to the special 1/4" by-pass port on the underside of the inlet manifold. A 3/8" flexible hose is recommended.

**BY-PASS HOSE ASSEMBLY** is designed for cold water or ambient temperature operation. **DO NOT EXCEED 6 MINUTES in BY-PASS** operation. Excessive temperatures will cause premature wear or damage to the pump and **VOID THE WARRANTY**.

Standard units may return the by-pass back to the inlet of the pump by installing a *Thermo Valve* in the by-pass line using 7091.41.

If unit is **INFREQUENTLY USED OR PERIODICALLY STORED**, seals may become dry. **UNDER SUCTION FEED**, system must be **PURGED BEFORE OPERATION** (system fluid must flow through the pump without discharge restriction) to assure full system pressure is reached.

### CHEMICAL INJECTOR PERFORMANCE CHART

Desired Pump Flow	Injector Orifice Size	SF Injector Model	Lo-Pressure Nozzle (Maximum injecting pressure less hose friction loss)	Max. Chem. Draw (0 PSI) (Downstream)	Hi-Press Nozzle "Deduction" (Press. drop across Inj.)
3.5	2.1 mm	7193	300 PSI	50 oz/min	200 PSI
3.5	2.3 mm	7194	185 PSI	56 oz/min	175 PSI
4.0	2.1 mm	7193	375 PSI	54 oz/min	250 PSI
4.0	2.3 mm	7194	225 PSI	50 oz/min	225 PSI
4.5	2.1 mm	7193	485 PSI	54 oz/min	325 PSI
4.5	2.3 mm	7194	260 PSI	50 oz/min	285 PSI
5.0	2.3 mm	7194	300 PSI	50 oz/min	350 PSI

Optimum performance of chemical injector occurs with a **35 ft. high pressure hose** and a minimum 3/8" I.D. The type of hose, extended lengths, reduced I.D. and fittings may create **back pressures** in excess of the low pressure nozzle rating and **prevent the injector** from drawing chemical. **Deduct hose friction loss from above low PSI Nozzle. Contact factory for assistance with other options.** Refer to Hose Friction Loss Chart in the High Pressure Guide for pressure loss with longer hose.

An optional, **specially ported chemical injector** may be mounted directly to the discharge of the unloader. Remove o-ring, check valve and spring from discharge fitting of unloader; insert into injector and thread into unloader discharge port. **Discard o-ring and discharge fitting.** Refer to the performance chart to determine the orifice size best suited to the system flow. **Chemical draw occurs under low pressure.** Select the *Dual Nozzle* (32149), *Adjustable Nozzle* (32151), or *Vari-Nozzle* (7930-7980) to permit the adjustment from low to high pressure.

For optimum performance when using a chemical injector, use a **single wire braid hose** on the discharge line. Too flexible a hose will prevent the unloader from receiving the full pressure signal to activate the by-pass mode.

For correct nozzle selection, **read system pressure at the pump. DO NOT READ SYSTEM PRESSURE AT THE HIGH PRESSURE GUN.** Incorrect pressure reading may result in: pump operation at excessive pressures, inconsistent chemical draw or possible damage to the pump or unloader.

- ★ ★ Before mounting pump on motor, apply P.N. 6106 Antiseize Lubricant to pump shaft.
- ★ ★ Refer to Tech Bulletin #55 for instructions on removing pump from gas engine or electric motor.

For warranty consideration contact CAT PUMPS for the local Authorized Baldor Service Center or call direct to Baldor 501\*646\*4711 for assistance. If you are uncertain as to the cause of failure (Pump or Motor), secure Returned Goods Authorization number and return complete assembly PREPAID to CAT PUMPS for evaluation.
