FEATURES
- Self-Priming
- Dry Running
- Soft, Noise Absorbing Mounts
- Corrosion Resistant Materials
- Meets ISO 8846
- Smooth Operation Without Accumulator Tank

SPECIFICATIONS
Motor: Permanent Magnet, Ball Bearing.
CE Models are fully suppressed.

Pump: Three chamber diaphragm design;
Self-priming up to 6 ft. suction lift;
Pump able to run dry without damage.

Note: The built-in bypass valve eliminates
the need for an accumulator tank.

AMP DRAW FLOW PRESSURE SWITCH
MODEL* VOLTS @ 10 psi (0.7 bar) GPM (l/min) MAX psi (bar)
3406-143 12V dc 4.4 1.8 (6.8) 25 (1.7)

* CE fully suppressed models are identified by a prefix “R” and a CE mark on the label. (i.e. R3406-143).
Self Declaration Of Conformance (SDOC) is available upon request.

OPERATION
With pump switch off and battery fully charged, fill water tank, open all faucets, then turn pump switch on. Water will begin to flow. When water is free of air, turn faucets off. Remember, you are filling the water heater and the toilet and shower lines. When all valves are shut off, pump will stop. Should pump fail to stop, turn switch off and see the trouble shooting guide.
**INSTALLATION**

**STEP 1**
Remove shipping plugs from pump ports. Some water from factory testing may spill out.

**STEP 2**
Install inlet A and discharge B port adapters.

**STEP 3**
Rubber mounts must be fully inserted into 4 mounting tracks.

**STEP 4**
Mount pump vertically, with pump head down or horizontally in an accessible location. If mounting vertically, motor up, attach motor mounts while supporting weight of pump.

**STEP 5**
Use 3/8" (10 mm) or 1/2" (12 mm) I.D. flexible hose (preferably braided or reinforced). Use hose clamps on the slip-on barb hose connectors.

**STEP 6**
Install minimum 3/8" (10 mm) I.D. hose or piping for feed lines. Use high pressure hose on all city water lines.

**STEP 7**
Install a Flojet strainer in an accessible location (for inspection and cleaning) between the tank and pump inlet. This strainer or equivalent is required for pump warranty to be valid.

**WIRING**

**STEP 1**
Use 14 gauge stranded wire to 20', 12 gauge to 50', from power source.

**STEP 2**
Use a 7-10 amp rated on-off switch on the (+) positive (red) motor lead.

**STEP 3**
Install 7-10 amp fuse protection on the positive lead.
WARNING: BEFORE SERVICING PUMP, TURN OFF PUMP AND DRAIN WATER FROM SYSTEM!!

*Service Kit includes #2, #3, #8 and drive cam assembly.

Quite often when a pump is worn or defective the one failed component has overburdened others. To avoid frequent aggravating repairs, Flojet offers service kit assemblies making complete repairs quick and easy.

**DISASSEMBLE**

**Switch**
1. Remove switch (1). Remove cover, disconnect switch wires.

**Housing Assembly**
2. Remove six pump head screws and carefully remove housing assembly (2-3-4)
3. Inspect check valve (3) for debris
4. Reassemble housing assembly (2-3-4)

**Check Valve Assembly**
Follow steps 2 and 3
3. Replace check valve (3)
4. Reassemble housing assembly (2-3-4)

**Pump Head, Motor**
Follow step 2
3. Slide lower housing (4) off motor shaft.

**REASSEMBLE**

**Motor**
1. Reassemble housing assembly (2-3-4) to motor. (Follow steps 4 to 10.)

**Pump Head**
2. Reassemble pump head housing assembly (2-3-4) to motor.

**Housing, Assembly, Check Valve**
3. Properly seat O-Ring in check valve assembly (3)
4. Install check valve (3) into housing (2) and push in.
5. Assemble on to lower housing (4), align 3 screws on to motor by rotating lower housing (4) if necessary to align.
6. Tighten screws evenly to 30 in. lbs. torque.

**Pressure Switch**
1. Place switch against front of pump (1), insert screws and take care not to cross thread or strip out threads in housing.
2. Reconnect wires, replace cover.
TROUBLESHOOTING

Failure to Prime - Motor operates, but no pump discharge
- Restricted intake or discharge line
- Air leak in intake line
- Debris in pump
- Punctured pump diaphragm (pump leaks)
- Crack in pump housing

Motor fails to turn on
- Loose wiring connection
- Pump circuit has no power
- Blown fuse
- Pressure switch failure
- Defective motor

Pulsating Flow
- Restricted pump delivery. Check discharge lines, fittings and valves for clogging or undersizing

Pump Fails to Turn Off After All Fixtures Are Closed
- Empty water tank
- Insufficient voltage to pump (low battery)
- Punctured pump diaphragm (pump leaks)
- Discharge line leak
- Defective pressure switch

Low Flow and Pressure
- Air leak at pump intake
- Accumulation of debris inside pump and plumbing
- Worn pump bearing (excessive noise)
- Punctured pump diaphragm (pump leaks)
- Defective motor

WARRANTY

FLOJET warrants this product to be free of defects in material and/or workmanship for a period of two years after purchase by the customer from FLOJET. During this two year warranty period, FLOJET will at its option, at no charge to the customer, repair or replace this product if found defective in material or workmanship, with a new or reconditioned product, but not to include costs of removal or installation.

RETURN PROCEDURE

Prior to returning any product to FLOJET, call customer service for an authorization number. This number must be written on the outside of the shipping package. Place a note inside the package with an explanation regarding the reason for return as well as the authorization number. Include your name, address and phone number.
