## INSTALLATION INSTRUCTIONS

Installation of the Giant Industries, Inc., pump is not a complicated procedure, but there are some basic steps common to all pumps. The following information is to be considered as a general outline for installation. If you have unique requirements, please contact Giant Industries, Inc. or your local distributor for assistance.

1. The pump should be installed flat on a base to a maximum of a 15 degree angle of inclination to ensure optimum lubrication.
2. The inlet to the pump should be sized for the flow rate of the pump with no unnecessary restrictions that can cause cavitation. Teflon tape should be used to seal all joints. If pumps are to be operated at temperatures in excess of $160^{\circ}$ F , it is important to insure a positive head to the pump to prevent cavitation.
3. The discharge plumbing from the pump should be properly sized to the flow rate to prevent line pressure loss to the work area. It is essential to provide a safety bypass valve between the pump and the work area to protect the pump from pressure spikes in the event of a blockage or the use of a shut-off gun.
4. Use of a dampener is necessary to minimize pulsation at drive elements, plumbing, connections, and other system areas. The use of a dampener with Giant Industries, Inc. pumps is optional, although recommended by Giant Industries, Inc. to further reduce system pulsation. Dampeners can also reduce the severity of pressure spikes that occur in systems using a shut-off gun. A dampener must be positioned downstream from the unloader.
5. Crankshaft rotation on Giant Industries, Inc. pumps should be made in the direction designated by the arrows on the pump crankcase. Reverse rotation may be safely achieved by following a few guidelines available upon request from Giant Industries, Inc. Required horsepower for system operation can be obtained from the charts on pages 3-5.
6. Before beginning operation of your pumping system, remember: Check that the crankcase and seal areas have been properly lubricated per recommended schedules. Do not run the pump dry for extended periods of time.
Cavitation will result in severe damage. Always remember to check that all plumbing valves are open and that pumped media can flow freely to the inlet of the pump.

Finally, remember that high pressure operation in a pump system has many advantages. But, if it is used carelessly and without regard to its potential hazard, it can cause serious injury.

IMPORTANT OPERATING CONDITIONS
Failure to comply with any of these conditions invalidates the warranty.

1. Prior to initial operation, add oil to the crankcase so that oil level is between the two lines on the oil dipstick. DO NOT OVERFILL.

## Use SAE 80-90W or Giant's p/n 01154

Crankcase oil should be changed after the first 50 hours of operation, then at regular intervals of 500 hours or less depending on operating conditions.
2. Pump operation must not exceed rated pressure, volume, or RPM. A pressure relief device must be installed in the discharge of the system.
3. Acids, alkalines, or abrasive fluids cannot be pumped unless approval in writing is obtained before operation from Giant Industries, Inc.
4. Run the pump dry approximately 10 seconds to drain the water before exposure to freezing temperatures.

## Specifications Model P430A

|  | U.S.................................. (Metric) |
| :---: | :---: |
| Volume | Up to 6.7 GPM ................. (25.4 LPM) |
| Discharge Pressure Continuous | Up to 3200 PSI ................ (220.6 bar) |
| Inlet Pressure | -4.35 to 145 PSI ............... (-. 3 to 10 bar) |
| Stroke | 0.945" ............................ (24mm) |
| RPM | ............ Up to 1450 RPM |
| Plunger Diameter | $0.708 \times$............................. (18mm) |
| Temperature of Pumped Fluids | Up to $160{ }^{\circ} \mathrm{F}$................... ( $71{ }^{\circ} \mathrm{C}$ ) |
| Inlet Ports | .... (2) 3/4" NPT |
| Discharge Ports | ......... (2) 3/4" NPT |
| Shaft Rotation | Top of pulley towards manifold |
| Crankshaft Diameter | 1.102 " ............................. (28mm) |
| Key Width | . 315 " .............................. (8mm) |
| Shaft Mounting | ... Either side ${ }^{1}$ |
| Weight | $36 \mathrm{lbs} .11 \mathrm{oz} \mathrm{....................}. \mathrm{(16.64} \mathrm{kg)}$ |
| CrankcaseCapacity | 30 fl.oz. ........................... (0.89 liters) |
| Volumetric Efficiency @ 1450 | ... (0.95) |
| Mechanical Efficiency @ 1450. | ..... (0.83) |

Consult the factory for special requirements that must be met if the pump is to operate beyond one or more of the limits specified above.

## NOTES:

In order to drive the pump from the side opposite the present shaft extension, simply remove the valve casing from the crankcase and rotate the pumps 180 degrees to the desired position. Be certain to rotate the seal case (item \#20) as well, so that the weep holes are down at the six o'clock position. Exchange the oil fill and the oil drain plugs, also. Refer to the repair instructions as necessary for the proper assembly sequence.

| P430 HORSEPOWER <br> REQUIREMENTS |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| RPM | GPM | 1000 | 2000 | 3000 | 3200 |
|  |  | PSI | PSI | PSI | PSI |
| 920 | 4.8 | 3.3 | 6.6 | 9.9 | 10.6 |
| 1050 | 5.4 | 3.7 | 7.4 | 11.2 | 11.9 |
| 1185 | 6.1 | 4.2 | 8.4 | 12.6 | 13.5 |
| 1315 | 6.8 | 4.7 | 9.4 | 14.1 | 15.0 |
| 1450 | 6.7 | 5.2 | 10.3 | 15.5 | 16.6 |

## SPECIAL NOTE:

The theoretical gallons per revolution ( $\mathrm{gal} / \mathrm{rev}$ ) is 0.0046 .
To find specific outputs at various RPM, use the formula: GPM $=0.0046 \times$ RPM

## HORSEPOWER RATINGS:

The rating shown are the power requirements for the pump. Gas engine power outputs must be approximately twice the pump power requirements shown above.

We recommend a 1.15 service factor be specified when selecting an electric motor as the power source. To compute specific pump horse power requirements, use the following formula:

$$
\text { HP = (GPM X PSI) / } 1450
$$

## Specifications Model P440A

|  | U.S.................................. (Metric) |
| :---: | :---: |
| Volume | Up to 5.5 GPM ................. (20.8 LPM) |
| Discharge Pressure Continuous | Up to 4000 PSI ................ (275.3 bar) |
| Inlet Pressure | -4.35 to 145 PSI ............... (-. 3 to 10 bar) |
| Stroke | 0.787 " ............................ (20mm) |
| RPM | ............ Up to 1450 RPM |
| Plunger Diameter | $0.708 \times$............................. (18mm) |
| Temperature of Pumped Fluids | Up to $160{ }^{\circ} \mathrm{F}$................... ( $71{ }^{\circ} \mathrm{C}$ ) |
| Inlet Ports | .... (2) 3/4" NPT |
| Discharge Ports | ......... (2) 3/4" NPT |
| Shaft Rotation | Top of pulley towards manifold |
| Crankshaft Diameter | 1.102 " ............................. (28mm) |
| Key Width | . 315 " .............................. (8mm) |
| Shaft Mounting | ... Either side ${ }^{1}$ |
| Weight | $36 \mathrm{lbs} .11 \mathrm{oz} \mathrm{....................}. \mathrm{(16.64} \mathrm{kg)}$ |
| CrankcaseCapacity | 30 fl.oz. ........................... (0.89 liters) |
| Volumetric Efficiency @ 1450 | ... (0.95) |
| Mechanical Efficiency @ 1450. | ..... (0.82) |

Consult the factory for special requirements that must be met if the pump is to operate beyond one or more of the limits specified above.

## NOTES:

In order to drive the pump from the side opposite the present shaft extension, simply remove the valve casing from the crankcase and rotate the pumps 180 degrees to the desired position. Be certain to rotate the seal case (item \#20) as well, so that the weep holes are down at the six o'clock position. Exchange the oil fill and the oil drain plugs, also. Refer to the repair instructions as necessary for the proper assembly sequence.

| P440 HORSEPOWER <br> REQUIREMENT |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| RPM | GPM | 1000 <br> PSI | 2000 <br> PSI | PSI | 4000 <br> PSI |
| 920 | 3.5 | 2.4 | 4.9 | 7.3 | 9.7 |
| 1050 | 4.0 | 2.8 | 5.5 | 8.3 | 11.1 |
| 1185 | 4.5 | 3.1 | 6.3 | 9.4 | 12.5 |
| 1315 | 5.0 | 3.5 | 6.9 | 10.4 | 13.9 |
| 1450 | 5.5 | 3.8 | 7.7 | 11.5 | 15.3 |

## SPECIAL NOTE:

The theoretical gallons per revolution ( $\mathrm{gal} / \mathrm{rev}$ ) is 0.00383 .
To find specific outputs at various RPM, use the formula: GPM $=0.00383 \times$ RPM

## HORSEPOWER RATINGS:

The rating shown are the power requirements for the pump. Gas engine power outputs must be approximately twice the pump power requirements shown above.

We recommend a 1.15 service factor be specified when selecting an electric motor as the power source. To compute specific pump horse power requirements, use the following formula:

$$
\mathrm{HP}=(\mathrm{GPM} \mathrm{X} \mathrm{PSI}) / 1450
$$

## Specifications Model P450A/P455

## REPAIR INSTRUCTIONS - P430/P440, P450, AND P455

Note: Always take time to lubricate all metal and nonmetal parts with a light film of oil before reassembly. This step will ensure proper fit, at the same time protecting the pump nonmetal parts (i.e., the elastomers) from cutting and scoring.

1) With a socket wrench, remove the three discharge valve plugs and three inlet valve plugs (32). Inspect the o-ring (33) for wear and replace if damaged.

2) Remove the o-ring (31). Inspect all parts for wear and replace as necessary. Apply one drop of loctite 243 to the valve plugs (32) and tighten to 125 ft . lbs.

3) Remove the pressure rings (24) and v-sleeves (23-

Note: P422 \& P423 pumps have a support ring) from the valve casing (26).

2) Using needle nose pliers, remove the inlet and discharge valve assemblies (27A). Note: It may become neccesary to remove the valve seat (27) from the valve casing using a slidehammer.

5) Use a 8 mm allen wrench to remove the 8 socket head cap screws (34). Carefully slide the valve casing (26) out over the plungers.

8) Remove the weep grooved seal (23 or 23B) together with pressure ring ( 24 P420 and P425 only) out of the seal adaptor (20). Check O-rings (21).

3) By inserting a small screw driver between the valve seat (27) and the valve spring retainer (30), the valve assembly can be separated.

6) Remove seal adaptors (20) and weep return rings (25) from the valve casing.

IMPORTANT! The grooved seal (23) or respectively grooved seal pack (23A) on the high-pressure side is to be fitted carefully into the valve casing (26) using a screwdriver. Under no circumstances must the seal surface in the valve casing or the seal lip be damaged.

## REPAIR INSTRUCTIONS - P430/P440, P450, AND P455

9) Check surfaces of plunger (16). Damaged surfaces cause accelerated seal wear. Deposits of all kinds must be removed from the plungers.

IMPORTANT! Plunger surfaces are not to be damaged. If there are lime deposits in the pump, care must be taken that the dripreturn bore in parts (25) and (26) ensure trouble-free drip-return.
11) After installation of high pressure seals (23-Note: P422 and P423, also have a support ring), place seal adaptor (20) with weep seals \& pressure ring installed, weep return ring (25) and high pressure weep return ring (24) over plungers. Slide valve casing over plungers and seat firmly. Replace the 8 socket head cap screws (34) and tighten to 35 ft .-lbs. in a crossing pattern (as shown to the right).

10) If the plunger pipe (16B), or oil seal (19) is worn, remove tension screw (16D) and remove along with plunger pipe (16B). Check and clean plunger surface (16A), check oil scraper ( 16 H ). Remove the gear seal adapter (20A) and, if necessary, replace oil seals with seal lips facing crankcase (1).Cover thread of tension screw (16D) with a thin film of Loctite and tighten carefully to 26 ft .-lbs. (35NM).

## GIANT INDUSTRIES LIMITED WARRANTY

Giant Industries, Inc. pumps and accessories are warranted by the manufacturer to be free from defects in workmanship and material as follows:

1. For portable pressure washers and self-service car wash applications, the discharge manifolds will never fail, period. If they ever fail, we will replace them free of charge. Our other pump parts, used in portable pressure washers and in car wash applications, are warranted for five years from the date of shipment for all pumps used in NONSALINE, clean water applications.
2. One (1) year from the date of shipment for all other Giant industrial and consumer pumps.
3. Six (6) months from the date of shipment for all rebuilt pumps.
4. Ninety (90) days from the date of shipment for all Giant accessories.

This warranty is limited to repair or replacement of pumps and accessories of which the manufacturer's evaluation shows were defective at the time of shipment by the manufacturer. The following items are NOT covered or will void the warranty:

1. Defects caused by negligence or fault of the buyer or third party.
2. Normal wear and tear to standard wear parts.
3. Use of repair parts other than those manufactured or authorized by Giant.
4. Improper use of the product as a component part.
5. Changes or modifications made by the customer or third party.
6. The operation of pumps and or accessories exceeding the specifications set forth in the Operations Manuals provided by Giant Industries, Inc.

Liability under this warranty is on all non-wear parts and limited to the replacement or repair of those products returned freight prepaid to Giant Industries which are deemed to be defective due to workmanship or failure of material. A Returned Goods Authorization (R.G.A.) number and completed warranty evaluation form is required prior to the return to Giant Industries of all products under warranty consideration. Call (419)-531-4600 or fax (419)-531-6836 to obtain an R.G.A. number.

Repair or replacement of defective products as provided is the sole and exclusive remedy provided hereunder and the MANUFACTURER SHALL NOT BE LIABLE FOR FURTHER LOSS, DAMAGES, OR EXPENSES, INCLUDING INCIDENTAL AND CONSEQUENTIAL DAMAGES DIRECTLY OR INDIRECTLY ARISING FROM THE SALE OR USE OF THIS PRODUCT.

THE LIMITED WARRANTY SET FORTH HEREIN IS IN LIEU OF ALL OTHER WARRANTIES OR REPRESENTATION, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTIES OR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND ALL SUCH WARRANTIES ARE HEREBY DISCLAIMED AND EXCLUDED BY THE MANUFACTURER.
