

Magnetic Drive Centrifugal Pumps

Iwaki Walchem is proud to offer the highest value, sealless, non-metallic mag-drive pumps for your chemical process applications. These pumps are manufactured solely with non-metallic wetted parts to resist chemical attack and ensure your process purity. Pumps range in size to easily handle all of your application needs from OEM and point-of use through bulk transfer.

MDH

MDF-L

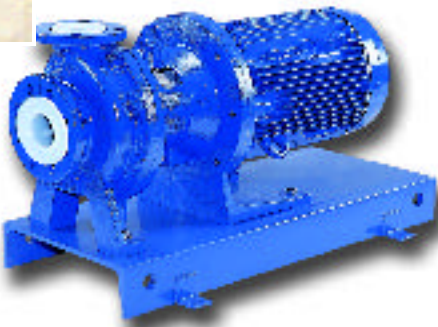

MDH Line

The MDH series are non-metallic, close-coupled centrifugal pumps designed with the applications of plating and industrial processes in mind. These pumps also have our Dry Run Capable technology, which permits the pump to be run without fluid. These pumps come in two different materials, polypropylene and fluoroplastic, to ensure the safe use of even the most aggressive chemicals.

MDF-L Line

MDF-L is a family of compact close-coupled pumps incorporating patented repeatable, dry run technology. ETFE fluoropolymer wetted materials give MDF-L pumps excellent corrosion resistance to handle the most difficult chemical processes.

MDM

MDE

MDM Line

MDM is a wide ranging line of chemical process pumps designed to solve the most demanding chemical handling applications. Two materials of construction and convenient mounting configurations allow MDM to handle many different aggressive chemical and high purity applications.

MDE Line

MDE is the largest in the Iwaki Walchem chemical process pump line. This series delivers fluid purity protection, corrosion resistance, durability and safety. MDE combines state-of-the-art pump technology with ANSI B73.1 dimensions to make replacement of sealed pumps fast and easy.
