HEAD CAPACITY TABLE

TOTAL HEAD				CAPACITY	
PSI	(bar)	FEET	METERS	GPM	LPM
5	(.35)	11.6	3.5	9	34
10	(.69)	23.1	7.0	7	26

20	(1.4)	46.2	14.1	3	11

Progressively longer life may be expected as operating pressures are reduced.

Table shows approximate Head-Flow for new pump in U.S. gallons and litres with nitrile impeller.

	Explosion hazard. Do not use where flammable vapors are present. Do not pump solvents, thinners or gasoline. To do so can cause an explosion which can result in injury or death.

OPERATING INSTRUCTIONS

INSTALLATION

1. Pump must be mounted in a horizontal position. Mounting in horizontal position will maximize the "Dry Running" time.
2. Drive – Direct.
3. SELF-PRIMING – Pump will produce a suction lift approaching 10 feet when dry and a lift up to 22 feet when primed. BE SURE SUCTION LINES ARE AIR-TIGHT or pump will not self-prime. Initial start up without any retained fluid should be for the short time possible-less than 1 minute recommended.
4. RUNNING DRY – This pump has a post operational "Dry Running" capability. This means once the inlet supply has dried up, the pump will run with minimal potential for impeller damage due to "dry running" by virtue of retaining trapped liquid in the pump for approximately 10 minutes. For optimum impeller life pump should be manually turned off as soon as inlet line is empty.
5. NOTICE – Do not pump solvents, thinners, highly concentrated organic acids. Impeller and pump damage may occur. If corrosive fluids must be handled, consult Jabsco Chemical Resistance Chart (which is available upon request from ITT Jabsco). Pump life will be prolonged if pump is flushed with water after each use or after each work day.
6. PRESSURES – For continuous operation, discharge pressure should not exceed 20 psi (1,4 bar).
7. TEMPERATURES – Nitrile impeller supplied in pump is recommended for liquid temperatures of 50° to 180° F (10° to 83° C).
8. FREEZING WEATHER – Drain unit by loosening the end cover.
