MODEL ABBREVIATIONS:

A = Smooth Inlet/Outlet, C = Threaded Inlet/Outlet
 MD = Magnetic Drive

DESCRIPTION: Series 320 & 335 pumps are centrifugal magnetic drive pumps, eliminating the need for a shaft seal. These pumps can be serviced with a screwdriver or adjustable wrench. See the repair parts list for a breakdown of replacement parts.

OPERATION:

These pumps are not self-priming, lack a suction lift, and thus require a **flooded suction**. These pumps **cannot be run dry** because the impeller requires the liquid being pumped for lubrication. The direction of motor rotation should be clockwise when facing the inlet of the pump. For liquids with a specific gravity greater than water, have a higher viscosity, or for elevated temperatures, a trimmed impeller may be necessary. For application assistance, contact March Pump.

ELECTRICAL:

320 motors are available in different electrical configurations such as 115V 50/60Hz, and 230V 50/60Hz, 1 phase, air cooled. 335 pumps are 115/230V 50/60Hz, 1 phase or 230/460V 50/60Hz, 3 phase, TEFC. The motors are U.L. listed and rated as continuous duty. Explosion proof and special voltage motors are available on the 335 upon special order.
