

# FLOJET®

## G57C Series Industrial Air Driven Pump

### INSTALLATION & OPERATION INFORMATION FOR MODELS G57C XXX

#### PRODUCT DATA

<b>Pump Design</b>	Double Diaphragm
<b>Wetted Parts</b>	
Body and Check Valves	Polypropylene
Diaphragm	Kalrez®
Check Valve Seals	Viton® Extreme™
Springs	Hastelloy®
<b>Ports</b>	Air Inlet 1/4" (6.3 mm)
Liquid Inlet	3/8" (9.5 mm) - 1/2" (12.7 mm) - 3/4" (19.1 mm)
Liquid Outlet	3/8" (9.5 mm) - 1/2" (12.7 mm) - 3/4" (19.1 mm)
<b>Net Weight</b>	1.2 lbs. (0.54kg)

#### DESCRIPTION

FLOJET Industrial G57C Pumps are designed for general commercial and industrial applications. These pumps are constructed from a selection of materials for handling a broad range of chemicals.

#### Allowed fluids for Kalrez® materials

Lubricating Oils,  
Hydraulic Oils,  
Vegetable Oils,  
Alcohols, Keytones,  
Aromatic Hydrocarbons,  
Aliphatic Hydrocarbons,  
Diluted Acids, Alkalis,  
Soaps with solvents,  
Automotive brake fluid,  
Acetones, Ethanol, inks.

#### Not Allowed fluids for Kalrez® materials

Halogenated Solvents  
**Warning: Do NOT pump**  
Petrol or fluids with flash  
point below 98°F (37°C)  
Explosion and death may  
occur.

**Warning:** Incompatible  
fluids may cause pre-mat-  
ure failure of the pump.  
It is the customer's  
responsibility to ensure  
that fluids are compatible  
with pump materials.

### PERFORMANCE SPECIFICATIONS

#### PUMP

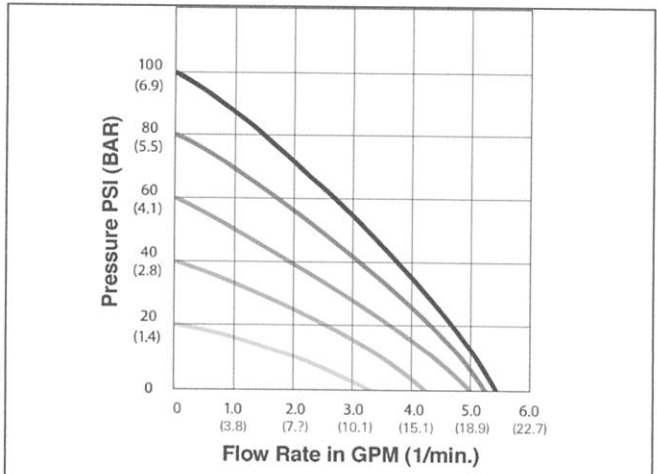

Liquid Temperature	Min	40°F (4.4°C)
	Max	120°F (48.9°C)
<b>Priming</b>	Dry	15 ft. (4.5 m)
	Wet	20 ft. (6.1 m)
<b>Flow Rates</b>	Max	Up to 5 GPM (18.9 L/min)
<b>Air Inlet Pressure</b>		20 to 100 PSI (1.4 to 6.9 bar)
<b>Noise Level</b>	Max	87dB

Kalrez® and Viton® Extreme™ are trademarks or registered trademarks of DuPont Performance Elastomers. DuPont is a registered trademark of DuPont and its affiliates. Hastelloy® A registered trademark of Haynes International, Inc. John Guest® A registered trademark of John Guest International, Limited.

#### AIR FLOW RATE WITH 1/2" PORTS @ 2 GPM

Air In (PSI)	Air Flow Rate (SCFM)
40	1.0
60	1.3
80	1.7
100	2.2

#### PERFORMANCE: KALREZ® WITH 1/2" PORTS

#### DIMENSIONAL DRAWING

Inches (millimeters)

Dimensional tolerances ± 0.06 inches  
Consult factory if precise details are required.

## MOUNTING

The FLOJET G57C self-priming pump should be mounted in a dry and adequately ventilated area. This pump can be mounted several feet from the tank, above or below the fluid level. For most applications, no more than 4 feet above the fluid level is recommended. **This is not a submersible pump.**

Secure Pump to desired fixture by inserting screws through the rubber grommets in the baseplate of the pump. **Ports must be facing down.** Contact factory for mounting bracket and hardware options. Wall or rack mounting is preferred.

## HOSE CONNECTIONS

Liquid In - Use 3/8", 1/2", or 3/4" I.D. reinforced hose or equivalent. Avoid sharp bends that could restrict flow or cause hose to collapse under vacuum.

Liquid Out - Use 3/8", 1/2", or 3/4" I.D. reinforced hose for discharge tube. 3/4" I.D. hose must use 90° elbows when using large muffler.

Air In - Make sure air regulator is set at zero. Use reinforced 1/4" I.D. hose. Connect "Air In" to air supply fitting on regulator. If pumps are installed in an enclosed area, it is recommended to connect a hose to the air discharge port (exhaust) and vent air to atmosphere (Requires small exhaust port PN# 20756103B not included).

## PLUMBING

Use a flexible hose to avoid excess stress on pump ports. **DO NOT** crimp or kink hose. All hose should be the same size as the pump port fittings.

All fittings and hose must be compatible with fluid being pumped. It is recommended to use plastic fittings only.

The use of check valves in the plumbing system could interfere with the priming ability of the pump. If unavoidable, check valves in the pumping system must have a cracking pressure of 2 PSI or less.

Use a minimum 40 mesh strainer or filter in the tank or pump inlet line to keep large foreign particles out of the system.

Liquid inlet port must be equal to or larger than the liquid outlet port.

## OPERATION

At start-up, regulate air pressure to desired setting. For most installations 20 PSI (1.4 bar) inlet will be adequate, although **DO NOT** go below 20 PSI. Pump will operate according to air supply. Flow and pressure can be

adjusted by increasing or decreasing air pressure to accommodate varying product viscosities, length of lines or other installation conditions. Review flow curves located on page 1 for further assistance. High viscosity fluids and hose length will limit priming distance.

**IF PUMP IS TO BE USED IN HIGH FLOW, LOW PRESSURE APPLICATIONS, ADJUST AIR PRESSURE TO 20 PSI (1.38 BAR) ABOVE DISCHARGE PRESSURE.**

**CAUTION: DO NOT EXCEED 100 PSI (6.9 bar) AIR INLET PRESSURE.**

**CONTINUOUS OPERATION ABOVE 120°F (48.9°C) WILL REDUCE PUMP LIFE.**

**AIR MUST BE DRY AND OIL FREE.**

Compressors must have dryers and/or a water separator in the air distribution system. Pumps that fail due to water in the air chamber will not be covered under the limited warranty.

## GENERAL SAFETY INFORMATION

Protect yourself and others by observing all safety information. Follow all safety codes and the Occupational Safety and Health Act (OSHA).

**WARNING**

**DO NOT PUMP GASOLINE OR FLAMMABLE LIQUIDS OR USE WHERE FLAMMABLE VAPORS ARE PRESENT.**

*If used with CO<sub>2</sub> or N<sub>2</sub> be sure the area is well ventilated.*

## CAUTION:

Do not clean or service FLOJET pumps, hoses or valves while the system is pressurized. Plastic air inlet ports do not have a check valve. Prior to cleaning or servicing, purge the pump by carefully tilting the pump so ports are facing up and remove suction line from source. Turn air off and disconnect air inlet line. (Standard brass air inlet ports have a check valve).

## PREVENTIVE MAINTENANCE TIPS

Tips to help prolong your pump's life.

- If pumping liquid other than water, pump should be flushed with water (if applicable) after every use.
- Before freezing conditions occur, pump must be liquid free.
- If mounting pump in an outdoor environment, shield pump from environmental extremes (i.e. sunlight, water from washdown spray, rain, etc.). Avoid high heat and humid installations.
- When using an air compressor, use an inline air dryer (PN# FJ520B) before the pump to limit water build-up.

## MODEL G57C SERIES EXPLODED VIEW

Key	Part No.	Description	Qty
1	20740022A	Kit, Check Valve, Assy., Polypropylene Viton® Extreme™, Hastelloy®	4
2	21000661A	Kit, Diaphragm, Kalrez®	2
3	20751002A	Kit, Shaft & Slide Valve Assy. (Viton®) <i>KALREZ</i>	2
4	20896000A	Kit, Flange & Housing Assy. w/"O" Ring	2
5	20753000A	Kit End Caps	2

Key	Part No.	Description	Qty
6	20758200A	Kit Hardware - Includes	
		Screws #10 x 1.5" Hi Low	14
		Retainer Clip Small	2
		Retainer Clip Large	2
		Exhaust Port (Port x 1/4" HB)	1
		Exhaust Muffler	1
7	20132000	Kit, Grommets	4

### G57C DISASSEMBLY PROCEDURE

First, remove inlet air line, muffler and suction/discharge line from the pump. This is accomplished by using a flat-bladed screwdriver to slide the retaining clips away from the air inlet, muffler and suction/discharge fittings and pulling the fittings away from the pump body. Now remove the muffler by sliding the retaining clip away from the muffler base and pulling the muffler out of the pump body.

Using a Phillips screw driver remove the seven (7) screws from the front end cap followed by the (7) screws from the rear end cap. With the front end cap facing up and the rear end cap facing down on the workbench, position a flat bladed screw driver into the slot located above the muffler port and just below the pad marked Air/CO<sub>2</sub> and lift off the front end cap. The rear end cap can be removed by placing the flat bladed screwdriver under the fully opened port retaining clip and lifting off.

Note the position of the suction and discharge valves before removing them from the pump body. The first diaphragm is removed from the pump shaft by unscrewing in a counter clockwise direction. The second diaphragm is removed by placing the flat tip of a screwdriver into the exposed slot at the end of the pump shaft and unscrewing the diaphragm from the shaft. To remove the flange housing, place the tip of the flat bladed screw driver into the air bleed hole on the lower side of the flange housing and lift up the lower end separating the flange housing from the pump body.

The slide valve assembly and pump shaft can be removed by simply pulling them from the pump body. The pump shaft then can be removed from the slide valve yoke assembly.

### REASSEMBLE PROCEDURE

Assemble the slide valve and pump shaft with the yoke placed between the (2) bumpers on the pump shaft. Install the slide valve/pump shaft assembly into the pump body making sure the O-rings in the slide valve are in place. To install the flange housing, pre-lube the o-ring with Parker Super "O" Lube and install on flange housing and place housing over the pump body aligning the flange housing with the pump body ribs pressing it into place.

Install the first diaphragm and O-ring on to the pump shaft by threading on to shaft using a flat blade screwdriver to hold the pump shaft until the diaphragm is tight. Install the second diaphragm and O-ring on to the pump shaft turning clockwise until tight.

Install the suction valves with springs facing into the pump body and the discharge valves with the springs facing out. See arrows on pump rear end cap below suction and discharge ports.

Install the port retainer clips (large) into the pump end cap (mounting base) and install the seven (7) Phillips screws into pump body and cross tighten until snug and then cross torque to 22-24 inch pounds. Install port retaining clips (small) into the pump body with tabs facing out. Position the front end cap and install the seven (7) Phillips screws into pump body and cross tighten until snug and then cross torque to 22-24 inch pounds.

Install the muffler in the center port by pushing it in and sliding the retainer clip into place. Install the suction and discharge ports and the air inlet port fitting and slide the retainer clips in place. Check for leaks.

## MODEL NUMBERING MATRIX

G57C XX X X

### PORTS (Liquid Inlet / Outlet)

00 - NO PORT  
 14 - 1/2 OD JOHN GUEST® PLASTIC  
 17 - 1/2 NPT, MALE, STRAIGHT  
 18 - 3/8 NPT, MALE, STRAIGHT  
 20 - 3/8 STRAIGHT HOSE BARB  
 21 - 1/2 STRAIGHT HOSE BARB  
 22 - 3/4 STRAIGHT HOSE BARB  
 23 - 3/8 ELBOW HOSE BARB  
 41 - 3/8 OD JOHN GUEST® PLASTIC

### ELEMENT (Air Inlet / Outlet)

2 - 1/4 STRAIGHT HOSE BARB BRASS, SMALL MUFFLER  
 3 - 1/4 ELBOW HOSE BARB BRASS, SMALL MUFFLER

### PACKAGING

A - SINGLE PACK  
 D - BULK PACK (72)

## TROUBLESHOOTING CHART

Symptom	Possible Cause(s)	Corrective Action
Pump will not start (stalls)	1. Inadequate air supply (20 PSI Min.) 2. Contaminated air supply 3. Ruptured diaphragm (2) 4. Check shuttle valve for wear (11)	1. Increase air inlet pressure 2. An air dryer might be required 3. Replace diaphragm (2) 4. Replace shuttle valve if necessary (11)
Pump runs, but no fluid	1. A leak or break in the product inlet line 2. A leak or break in the product discharge line	1. Replace product line 2. Replace product line
Pump leaks through exhaust port	1. Leak at upper exhaust port o-ring (13) 2. Shaft seal o-rings damaged or worn 3. Inadequate slide lubrication	1. Replace exhaust port (13) 2. Replace shaft seal o-rings 3. Replace with shuttle valve kit
Flow rate is low	1. Tubing or hose is damaged or blocked 2. Check viscosity of medium being pumped  3. Check valves not seated correctly (6)	1. Clean or replace 2. Reduce viscosity of medium, increase hose diameter or contact factory for recommendation 3. Reinstall check valves (6)
Pump leaks	1. Ruptured or worn out diaphragm (2) 2. Pump housing screws not torqued adequately	1. Replace diaphragm (2) 2. Torque screws to 20 in lb

## G57C PORT FITTINGS (All liquid fittings include Vitor® Extreme™ O-ring.)

PART NUMBER	DESCRIPTION	QTY	PART NUMBER	DESCRIPTION	QTY

## WARRANTY

FLOJET warrants this product to be free of defects in material and/or workmanship for a period of one year after purchase by the customer from FLOJET. During this one year warranty period, FLOJET will at its option, at no charge to the customer, repair or replace this product if found defective, with a new or reconditioned product, but not to include costs of removal or installation. No product will be accepted for return without a return material authorization number. All return goods must be shipped with transportation charges prepaid. This is only a summary of our Limited Warranty. For a copy of our complete warranty, please request Form No. 100-101.

## RETURN PROCEDURE

Prior to returning any product to FLOJET, call customer service for an authorization number. This number must be written on the outside of the shipping package. Place a note inside the package with an explanation regarding the reason for return as well as the authorization number. Include your name, address and phone number.
