ELECTRIC BILGE PUMPS

INSTALLATION

MOUNTING

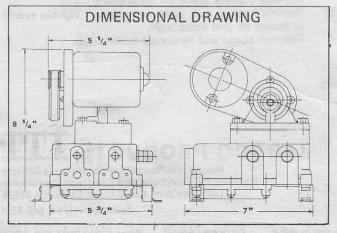

Mount upright in a dry location (above highest bilge water level) on a solid surface. Adjust belt tension for 1/4 inch play between pulleys.

PLUMBING

For intake and discharge use 34" I.D. non-collapsible hose. Keep intake and discharge lines free of kinks and restrictions. Use the 34" bilge in-line strainer (PAR Model 36200-0000) in the intake line from the bilge to protect pump from debris. Use a 34" thru-hull fitting (PAR Model 59431-0000) for discharge.

WIRING

Wire pump in a circuit independent of all other electrical fixtures. Use stranded copper wire. Install fuse in positive circuit. See table for recommended wire and fuse size. See diagram for wiring connections. Use a 10 amp-rated switch (JABSCO 3-way switch Model 96070-0110 or PAR 44960-0000). After installation, it is recommended that voltage be checked at the motor terminals with motor operating under full load and all other appliances in the circuit operating. Voltage should not be less than 90% of rated motor voltage.

FEATURES

- Self-Priming
- Diaphragm Design Allows Dry Running
- Quiet Operation
- Built-in Hydraulic Pulsation Dampeners
- Permanently Lubricated Ball Bearings on Shaft and Connecting Rod
- Large Vibration Absorbing Pads
- Corrosion Resistant Materials Throughout for Sea Water Service
- Meets USCG Electrical Standards

SPECIFICATIONS

Open Flow: 8.0 GPM

Vert. Dry Suction Lift: 10 feet (3m)

3/4" Slip-on Hose Ports:

Weight: 11 Lbs.

STANDARD MODELS

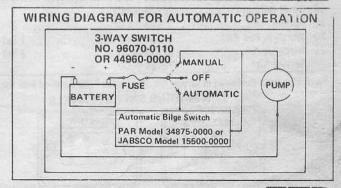

Model	Voltage	Amperage Nominal	
36600-0000	12 VDC	11.0	
36600-0010	24 VDC	5.5	
36600-0020	32 VDC	4.0	

MAINTENANCE

WINTER STORAGE: When possible it is preferred that the complete pump be removed and stored in a warm dry place. If this is not possible the pump must be completely drained. hoses removed and pump run until all water is expelled.

WIRE AND FUSE SIZE

Wire Length Between Battery and Motor	Model 36600-0000 12 Volt	Model 36600-0010 24 Volt	Model 36600-0020 32 Volt
1-25 feet	12 AWG	14 AWG	16 AWG
25-50 feet	10 AWG	14 AWG	14 AWG
Fuse Size:Slo-Blo	10 AMP	6¼ AMP	4 AMP
Normal	15 AMP	8 AMP	5 AMP

W/BOOT SPDT

SERVICE

TROUBLE SHOOTING

Problems

Causes

Loss of suction to pump.

Air leak in suction line.

- Bilge pickup not submerged,
- Intake hose kinked or plugged,
- Fouled intake or discharge

valve.

- Ruptured diaphragm.

Rough or noisy operation.

 Intake or discharge hose kinked or plugged.

Pump not mounted firmly.
 Loosened eccentric screw.

Ruptured or collapsed pulsation dampener.

VALVE REPLACEMENT

- Turn off power to pump. Remove four tie down bolts.
- Expose valves by lifting jack shaft and attached diaphragm assembly from pump base. Remove and clean or replace valves.
- Install valves, making sure rubber flapper is UP on intake and DOWN on discharge.
- 4. Replace motor-mount-diaphragm assembly and fasten evenly to base with the four tie down bolts.

DIAPHRAGM AND CONNECTING ROD REPLACEMENT

- 1. Turn off power to pump. Remove four tie down bolts.
- Lift jack shaft and the attached diaphragm assembly from pump base.
- Remove two diaphragm retainer screws and the diaphragm retainer.
- Remove eccentric screw. Remove connecting rod and diaphragm from jack shaft, then unscrew bolt to separate diaphragm and plates.
- Check diaphragm for cuts and cracks. Check rod assembly bearing for excessive wear. Replace if badly worn.
- Loosely reassemble diaphragm, diaphragm plates, washer and diaphragm bolt onto connecting rod. Firmly secure connecting rod to jack shaft with the eccentric screw. Secure diaphragm to motor mount with the diaphragm retainer and two screws.
- 7. Tighten connecting rod bolt.

PULSATION DAMPENERS REPLACEMENT

- Disconnect power leads from pump and remove from mount,
- Remove nine bottom cap screws and three bottom plate screws. Remove bottom cap and plate. Pull out and replace pulsation dampeners.
- 3. Replace bottom cap, plate and screws. Tighten evenly to ensure air and water seals.
- 4. Reinstall pump and reconnect power leads.
